SUMMARY

Senior Cybersecurity student at the University of Bahrain with hands-on experience in penetration testing, secure application development, IS security Auditing, and network forensics. Built and security-tested a production Android app from scratch. Seeking a cybersecurity analyst or junior penetration testing role.

EDUCATION

B.Sc. in Cybersecurity — University of Bahrain

Sep 2022 – August 2026

Relevant courses: Information Security, Network Security, Penetration Testing, IoT Security, IT Auditing, Blockchain Security, OS Security

PROJECTS

SafeNotes — Secure Notes App | Flutter · Dart · Android · AES-256

2025 – 2026

University of Bahrain — IT499 Senior Capstone | <https://github.com/Fawaz-Alkhayer/Senior-project>

- Architected and built a Flutter Android app with AES-256 local encryption protecting all stored notes
- Implemented biometric (fingerprint) and PIN authentication with per-note locking and category management
- Conducted full penetration test on the app — identified vulnerabilities, produced a CVSS-rated security report, and implemented mitigations
- Applied secure coding throughout: input validation, secure key storage, and reverse-engineering protections

Penetration Testing CTF Project | Kali Linux · GDB · Wireshark · Metasploit

2024 – 2025

ITCY490 — Penetration Testing Course | Team of 4

<https://github.com/Fawaz-Alkhayer/ITCY490-Penetration-Testing-Final-Project/blob/main/ITCY490-Project%20pdf%20solved.pdf>

- Solved 8 hands-on challenges covering command injection, filter bypass (base64 & hex encoding), reverse shells, and network forensics
- Exploited buffer overflow vulnerabilities using GDB stack analysis and crafted little-endian payloads to overwrite stack variables
- Performed PCAP forensics with Wireshark — extracted hidden PNG files and an MP4 audio file via FTP-DATA export to recover flags

Secure Client-Server Network System | Python · Socket Programming · TCP/IP

2022 – 2023

ITNE352 — Network Programming Course | Team of 2 | <https://github.com/Fawaz-Alkhayer/ITNE352-Project---Group-A8>

- Built a multi-client/server system in Python using TCP socket programming with credential-based authentication
- Implemented server-side session handling, structured communication protocol, and collaborative Git-based development

TECHNICAL SKILLS

Security: Penetration Testing, Infrastructure Security, Authentications, Command Injection, Security Awareness, Network Forensics, Secure Coding, Cryptography (AES-256, DES, RSA), Digital Forensics, IT Auditing

Tools: Kali Linux, Virtual machines, Autopsy forensics, Wireshark, Metasploit, Nmap, ACL, Android Studio, Git

Programming: Python, Dart / Flutter, java, SQL, Bash

Platforms: Linux (Kali / Ubuntu), Windows, Android
